

Kelpak on pistachios

Kelpak

Kelpak is scientifically proven to increase pistachio nut yields.

Increase in
pistachio yield with
Kelpak application
in California

+30%

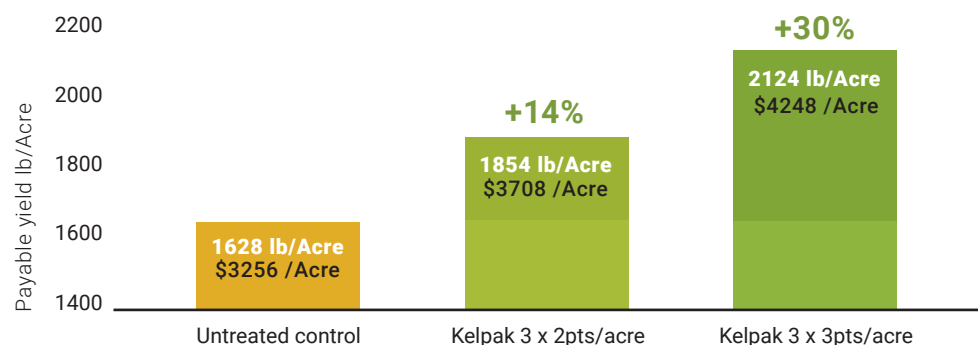

- **Improved rooting of nursery trees**
- **Promotes vigorous root growth**
- **Better nut set and retention**
- **Increased nut weight and yields**

Only Kelpak is manufactured using the Cold Cellular Burst extraction method to preserve the delicate compounds within the kelp's cell sap. With over forty years of knowledge and research behind it, Kelpak is scientifically proven to deliver prolific lateral root growth, increased resistance to abiotic stresses and higher nut retention, ultimately leading to significantly higher yields and improved returns for the grower.

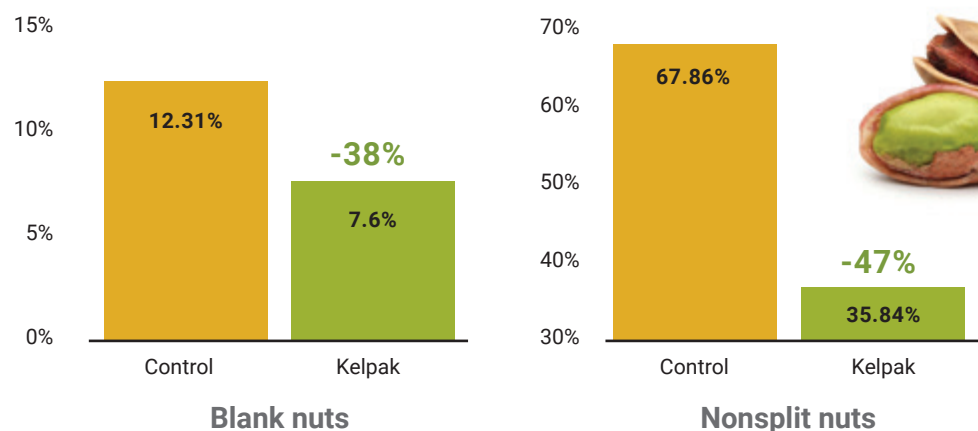

Trials in California and Spain show significantly improved quality and higher returns for the grower:

Variety Kerman Region Famosa, California Year 2020

Variety female: Kerman Male: Peters Region Toledo, Spain Year 2017

Less is better

Recommended application 2 to 3pts/Ac X 3 (in 100gal water/acre)

1. Apply 2 to 3 pts/Acre at petal fall.
2. Repeat 2-3 weeks after first application at nut development.
3. Repeat at 5-6 weeks after first application at nut fill.
